

For Immediate Release

HOTSTATUS ENTERPRISES COMPLETES AGREEMENT TO LICENSE TECHNOLOGY TO E*FILL AMERICA

*E*Fill America Will Use HotStatus' Solution Suite as the Underlying Technology to Create a Fully Integrated Network of Value-Added Warehouse Operations*

Mission Viejo, California – April 15, 2005 – HotStatus Enterprises, a leading provider of Supply Chain Management and Supply Chain Visibility solutions for Logistics Service Providers and medium to large enterprises, today announced an agreement with E*Fill America to sublicense and distribute the HotStatus software suite. All components of the HotStatus suite will be used by E*Fill, including the HotWMS™ Warehouse Management System, HotConnect™, HotVisibility™ and HotBill™.

E*Fill America, Inc. (E*Fill), has organized a network of independent warehouse businesses, resulting in one of the largest value-added warehousing operations in North America. E*Fill is partnering with independent warehouse owners that are collaborating and investing together to respond to larger national warehouse providers. E*Fill's value-added warehousing consists of storing, handling and managing inventory for manufacturers, distributors, processors, importers and exporters.

"The HotStatus product suite gives us an incredible capability to connect and maintain inventory visibility across our entire family of independent warehouse operations," said John R. Oren, Chairman and CEO of E*Fill. "We conducted an extensive 15-month due diligence and selected HotStatus over approximately 20 other warehousing management systems. In addition to their leading WMS functionality, HotStatus has an Internet based solution that allows us to easily integrate disparate systems and locations throughout our network of warehouse operations."

E*Fill provides customers with a superior choice over the nation's largest third-party logistics providers of value-added warehousing services. This is a powerful way for independent warehouse companies to effectively compete in all aspects with the nation's largest third-party logistics providers of warehousing services.

About HotStatus Enterprises, Inc.

Founded in 1999, HotStatus provides best-of-breed software and integration solutions to help customers efficiently manage their supply chain and warehousing operations. By enabling multi-point connectivity and visibility throughout distributed operations, HotStatus solutions provide maximum control and return on investment.

HotStatus products have been designed from the ground up to provide a fully integrated enterprise solution of supply chain visibility, connectivity and warehouse management. The HotStatus product suite is designed to allow customers to create a solution that fits their needs – ranging from rapid implementation, web-based applications to highly customized application solutions. Customers have the option to implement the HotStatus products within their own data center operations or in a fully hosted Internet-based offering. Either way, HSE customers realize benefits in weeks - not months or years.
